COJALI

SPARE PARTS AND TECHNOLOGY FOR COMMERCIAL VEHICLES

Cojali is a Spanish multinational company and a leading manufacturer of cooling systems, brake systems, electronic components, multibrand diagnostics and telematics for commercial vehicles, agricultural vehicles, construction machinery and marine vessels.

Established in 1991, Cojali focuses on investigation, development and innovation for commercial vehicles in the independent market. Nowadays, and thanks to a vast experience and knowledge of the market, Cojali has managed to become a consolidated brand in more than 100 countries around the world.

This provides trust and a commitment to the maximum guarantee and quality of the product exported, which turn this brand into an alternative even for first brands.

●.cojali

AIR BRAKE SYSTEMS

Since 1994, Cojali has manufactured spare parts for air brake systems and electronic control units, and designed solutions for original equipment.

Among the products of this family, we can find a wide range of components:

- Valves.
- Air dryers.
- Clutch servos.
- Slack adjusters.
- Actuators and brake chambers.
- Repair kits.

All brake system products of Cojali are focused on truck, bus, trailer and semi-trailer, light vehicles and agricultural vehicles.

COOLING SYSTEMS

Cojali offers a wide and flexible product range, adapted to the main brands and models of commercial vehicles.

Among the products of this family, we can find the following ones:

- Viscous fan clutches with electromagnetic control.
- Viscous fan clutches with bimetallic control.
- Fans.

We include the technology necessary to comply with the Euro 6 anti-pollution regulations, where the cooling system and its components have much more demanding requirements.

Cojali manufactures cooling systems for truck, bus, light vehicles, passenger cars and agricultural vehicles.

ELECTRONIC & ELECTRICAL COMPONENTS

Since electronics are increasingly present in all the components of the vehicle, and taking into account the vast experience and knowledge of Cojali in this sector, our R+D+I department is constantly offering coverage for this product range.

- Here we can find, among others:
- ABS sensors, wear sensors, height sensors.
 - Pressure and contact switches.
 - Button panels.
 - Door control panels.
 - Column switches.
 - Power windows.

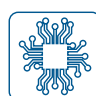

The parts of the electronic components are manufactured for truck, bus, trailer, semi-trailer, light vehicles and agricultural vehicles.

OEM SOLUTIONS

Cojali is not only a brand for the alternative independent market, but also an OE-level brand.

Thanks to a vast experience in the manufacturing of high-quality products, industry-leading and independent multibrand diagnostics and new technologies for fleet management, Cojali is a sure bet to provide solutions for leading vehicle and system manufacturers.

RECONDITIONED PRODUCTS

The reconditioning of parts is subject to strict quality controls. It is a complex and thorough process, since all the part components that might be worn or have failures or fatigue are replaced by new ones, in addition to the renewal of the electronic part and the subsequent reprogramming or parameter setting, depending on the case.

Some of the products that are reconditioned at Cojali are the following ones:

- Electronic control units.
- Instrument panels.
- Electronic valves.
- Brake calipers.

i-PARTS ASSIST

i-PARTS Assist, Cojali's latest Parts Support Program aimed towards the workshop. Through a series of guides and video tutorials, the workshop is capable of easily carrying out the installation of components that may require reprogramming or the use of diagnostics tools.

JALTEST DIAGNOSTICS

Jaltest is a multibrand and multisystem diagnostics tool developed to perform the most advanced vehicle diagnostics and maintenance tasks in an easy and intuitive way, not only by reading error codes, but also by providing troubleshooting guides.

Jaltest after-sales support is focused on delivering professional services to the workshop through:

- Technical Assistance.
- Training & e-Learning.
- Specialized Customer Support.

Jaltest offers coverage for commercial vehicles, agricultural vehicles, construction machinery and marine vessels.

JALTEST TELEMATICS

Jaltest Telematics introduces, in an exclusive way, the concept of Cloud Diagnostics, which consists in remote diagnostics in real time that allows the access to all the vehicle information in real time, and enables a predictive maintenance through error reading in the electronic systems installed in each vehicle.

With Jaltest Telematics, you will have a continuous and fluent communication between the fleet manager, the workshop manager, the vehicle driver and the customer. Each of them will have a role within the system.

- Main benefits of Jaltest Telematics:
- Efficient driving.
 - Cost reduction.
 - Predictive maintenance.
 - Integration with management systems.
 - Cloud Diagnostics.

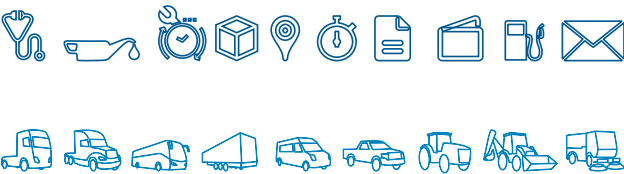

SERVICES

- Cloud Diagnostics.
- Location.
- Reports.
- Remote tachograph download.
- Maintenance.
- Alarms.
- Order management
- Messages.
- Workshop notifications.

JALTEST CONNECT

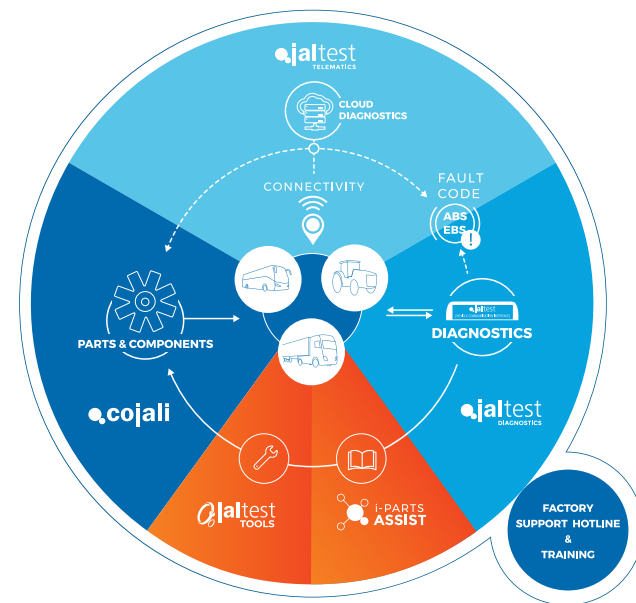

The new Jaltest Telematics product line that allows the M2M connection to obtain large amounts of diagnostics data, which can be displayed later in any management platform.

WORKSHOP 4.0

Solutions and services that connect workshops, fleets and parts distributors in order to perform a predictive maintenance and a professional, fast and efficient repair, by using Jaltest diagnostics tools, Cloud Diagnostics and the latest generation components for commercial vehicles.

Workshop 4.0. is distinguished by offering Training services, Vehicle Fix support, Consulting and Support for the installation and reprogramming of components (i-PARTS ASSIST).

JALTEST TOOLS

New Jaltest Tools product range, designed to provide the workshop with professional and reliable equipment, in accordance with the current technology present in commercial vehicles.

Together with the Jaltest diagnostics tool, it provides new business opportunities and a simple guaranteed service for the end client.

Product classification:

- Electronic measurement and testing equipment.
- Special tools.
- ADAS calibration equipment.
- Supplementary equipment.
