

CRMFL201-FLOOR TRACK DESIGN COLLISSION REPAIR SYSTEM

Model No : CRMFL201

DaTo Tech release the most durable on ground platform design collision repair system, providing utmost durability and ease of operation. The versatile design provides flexible movement of 360 degree. In incorporating two main pulling towers and two auxiliary pulling towers, the integrated design is an adequate asset for any body shop and denting service center, DaTo has taken utmost care in designing the collision repair system to have strong locking points, correct positioning of the holes and above all high grade pure steel for its production requirements.

The integrated frame can either be provided as assembled body or even as parts to fit in your shipping requirements for optimal shipping requirements, which leads DaTo as the best customizing manufacturer taking care of the shipping requirements as well. In normal cases, one manual hand pump and one pneumatic pump is part of the standard package however DaTo tech provides option to even supply two pneumatic pump units as per customer request. Amidst of chassis repair in case you need to take a measurement, the center lifting jack assembly aids you with the best option rendered by DaTo to lift the vehicles and carry out your precise measurement. The lifting bench even though is a standard part of DaTo floor and track design of the collision repair system, could also be separately purchased.

Specification
