

## LJES0101 - ENGINE SUPPORT

Model No : LJES0101

With heavy duty powder coated steel construction for durability, this 0.5T capacity support bar is ideal for providing support during engine or transmission repairs. The beam's fine adjustment control is obtained by using double screw / hook mechanism. The dual hooks allow the engine to be held accurately in the desired position to allow the users to gain easy access to areas in need of attention and repair. A much safer and comfortable way of working on an engine. It includes rubber base for the rail edges. Hand lever bars with particularly user-friendly ball handles. 360° rotatable base stand. Fine adjustment of the lifting height. Retaining hooks with threaded rods approximate 20mm. Strong steel construction with durable powder coating finish.
