

DTK801 - GLOW PLUG ANALYSER

Model No : DTK801

This Multi Voltage Glow Plug Analyser (DTK801) tests the status of diesel glow plugs quickly and easily, to determine whether or not the glow plug is close to being out of specification. The Analyzer with all graphical display without any languages shows the actual resistance of the glow plug with conclusive result after the test:

Features

- Beep alarm to alert the user in the event of Bad Resistance, Shorted or Open Circuit.
- Test all commercially available glow plugs including ceramic glow plugs
- Self-calibration for better accuracy
- Graphical display user interface and portable
- Reliable, fast and economical testing because there is no need to remove the glow plugs from the engine, or start the engine.
- The tester comes with a built-in torch light to facilitate working in dim surroundings for locating the glow plug. To turn ON, press and hold the green button as shown.
