

WEIFA300 - IGBT INVERTER WELDING MACHINE

Model No : WEIFA300

DaTo WEIFA300 is an advanced electronically controlled inverter welding machine. It comes with an advanced MOSFET technology which regulates the welding current and regulates the efficiency and duty cycle. Machine is tested for all the industry leading standards for safety and quality.

Accessories

- 500Amp Electrode Holder with 2.0Meters/35MM² Cable
- 300A Earth Clamp with 2.0Meters/35MM² Cable
- Welding Helmet & Brush35-50MM² Cable Connector

Features

- Adopts advanced MOSFET inverter technology with higher working efficiency
- In- built PWM control technology and constant current out control, allows excellent control over welding current
- Simple structure, durable built, reliability and easy maintenance.
- Excellent welding current controls make a smoother welding with less splatter and noise and with higher compensation property
- Auto voltage conversion technology , high voltage saving and high conversion rate
- Suitable for welding materials like stainless steel, carbon steel, cast iron , etc
- Machine comes with required accessories like electrode holder, earth clamp, welding cable, wire brush and protective mask

Specifications

| | |
|---------------------|--------------|
| Rated Input Voltage | 380V / 50 Hz |
| Current Range | 20-300A |
| Input Capacity | 12.0KVA |
| No-Load Voltage | 65V |
| Duty Cycle | 60% at 40° |
| Usable Electrode | 1.6 - 5.0 mm |
| Weight | 15.0 Kg |
